[ID_8] Explosion damage does not propagate around corners resulting in no player damage within blast radius

Description

Explosion damage fails to affect players positioned around structural corners or edges, even when they are within the expected blast radius,
When explosives (eg: sticky bombs) are detonated on one side of a wall corner, the explosion does not apply any indirect or splash damage to players positioned on the adjacent side. This suggests that explosion damage is fully blocked by geometry without considering realistic blast propagation or radius based damage,
This behavior breaks expected gameplay physics and can be exploited to avoid explosive damage in both PvE and PvP scenarios

For additional information please check the attachment.

Pre-Conditions:
Grand Theft Auto V is running (Story Mode or GTA Online) E&E,
Player has access to explosives (Sticky Bomb, RPG etc),
Player is located near a solid structure with a sharp corner

Steps to Reproduce:

Development

Add epic / RG-7

Steps to Reproduce:

1. Navigate to an area with a wall corner or building edge
2. Place a sticky bomb on one side of the corner
3. Move the player to the adjecent side of the corner
4. Stay within close proximity (inside expected blast radius)
5. Detonate the explosive
6. Observe player health and damage

Expected Result:
Explosion damage should partially or fully affect the player based on distance and obstruction,
Blast radius should apply indirect/splash damage around corners,
Player should receive realistic damage even without direct line of sight

Actual Result:
Player receives no damage from the explosion,
Explosion effect is completely blocked by the corner,
No indirect or splash damage is applied

Technical Reproducibility:
5/5

Severity:
High
